Sequence 1, Application US/08584031A
Patent No. 6030945
GENERAL INFORMATION:
APPLICANT: Ashkenazi, Avi J.
TITLE OF INVENTION: APO-2 LIGAND
FILE REFERENCE: 11669.22US03
CURRENT APPLICATION NUMBER: US/08/584,031A
CURRENT FILING DATE: 1996-01-09
NUMBER OF SEQ ID NOS: 17
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 1
LENGTH: 281
TYPE: PAT
ORGANISM: Homo saplens

C; Species: Papio sp. (baboon)
C; Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 04-Feb-2
C; Accession: S22052
R; Sanjanwala, M; Edwards, A.
submitted to the EMBL Data Library, September 1991
A; Description: Baboon Tumor Necrosis Factor Derived from Sequences of Ge
A; Reference number: S22052
A; Accession: S22052
A; Accession: S22052
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-233 <SAN>
A; Cross-references: EMBL: M52141; NID: 938159; PIDN: CAA44068.1; PID: 938160
C; Genetics:
C; Superfamily: tumor necrosis factor
C; Superfamily: carbohydrate (Ser) (covalent) #status predicted
F; 18,1081nddng site: carbohydrate (Ser) (covalent) #status predicted
F: 14,-177/Ni-nilfida honds: #status predicted
A; Molecule type: mRNA
A; Residues: 1-234 < NAS>

It can also act synergistically with interferon gac;Comment: TNF-alpha and -beta (lymphotoxin) are the products of different genes ut are produced by different cell types and have different induction kinetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A; Molecule type: DNA

MAY ALSO PLAY AN IMPORTANT ROLE IN ENHANCED BONE-RESORPTION IN HUNORAL HYPERCALCEMIA OF MALIGNANCY.

-1- SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (ISOFORM 1) AND SECRETED (ISOFORM 2).

-1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2/SODF; ARE PRODUCED BY ALTERNATIVE SPLICING.

-1- PRODUCED BY ALTERNATIVE SPLICING.

-1- TISSUE SPECIFICITY: HIGHEST IN THE PERIPHERAL LYMPH NODES BUT WEAK IN SPLEEN, PERIPHERAL BLOOD LEUKOCYTES, BONE MARROW, HEART, PLACENTA, SKELETAL MUSCLE, STOMACH AND THYROID.

-1- INDUCTION: UPREGULATED BY T CELL RECEPTOR STINULATION.

-1- SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  use by non-profit institutions as long as its content is in no way modified and this statement is not removed.          DISPASE: DEFECTS IN THESES ARE THE CAUSE OF AN X-LINKED IMMUNODEFICIENCY WITH HYPER-IGM (HIGM!), AN IMMUNOGLOBULIN ISOTYPE SWITCH DEFECT CHARACTERIZED BY ELEVATED CONCENTRATIONS OF SERUM IGM AND DECREASED AMOUNTS OF ALL OTHER ISOTYPES. AFFECTED MALES PRESENT AT AN EARLY AGE (USUALLY WITHIN THE FIRST YEAR OF LIFE) RECURRENT BACTERIAL AND OPPORTUNISTIC INFECTIONS, INCLUDING RECURRENT BACTERIAL AND OPPORTUNISTIC INFECTIONS, INCLUDING PNEUMOCYSTIS CARINII PNEUMONIA AND INTRACTABLE DIARRHEA DUE TO CRYPTOSPORIDIUM INFECTION. DESPITE SUBSTITUTION TREATMENT WITH INTRAVENOUS IMMUNOGLOBULIN, THE OVERALL PROGNOSIS IS RATHER POOR, SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY. DATABASE: NAME=CD40LDase;
                                                                                                                                                                                                                                              . Genet. 99:624-62/(1997). FUNCTION: MEDIATES B-CELL PROLIFERATION IN THE PRESENCE STIMULUS AS WELL AS IGE PRODUCTION IN THE PRESENCE INVOLVED IN IMMUNOGLOBULIN CLASS SWITCHING.
